DUO

DUO

the dual drive apron bus has returned

Safe and Efficient Apron Bus Operations.

Carbridge Airside Transport is a world leader in airport bus operations and is proud to announce the launch of the Carbridge DUO. For many years, airports and apron operators have not been able to purchase a high quality, reliable and hard working DUAL DRIVE STAND apron bus. This is no longer the case, as the Carbridge DUO is now available for delivery. With quality design and manufacturing to the highest standards, airport operators now have the opportunity to once again utilise an apron bus specifically designed for operations in tight areas, greatly improving safety and efficiency.

Reliability, experience and first class after sales service from a company that truly understands the needs of operators.

Carbridge History

Our company is Australia's largest airport bus specialist. As well, the Principals have over forty five years of bus industry experience and we truly understand, with precise detail, all aspects of quality bus management and operations. Transferring over seven million passengers annually across five major airports, Carbridge has an excellent service delivery history with each contract managed well above airport expectations. We are a proven deliverer of costs savings to airports due to our quality management and unique understanding of airport operations. We have brought all of this knowledge and experience together in the development of the new DUO dual drive apron bus.

DUO Story

For those airports that see the need for dual drive buses, currently only aging vehicles are available to meet that need. Our company was in this position, and after four years of planning and development we have been able to bring to market a quality dual drive apron bus. Built to stringent global standards, utilising universally known mechanical components, and overseen by the strictest quality control. All of which is supported by a worldwide warranty and excellent after sales support. With competitive pricing and a host of options, the DUO represents a sound vehicle purchase decision.
